

BAREM test inițial clasa a X-a (modelul 1)

I. 4· 0,5p = 2p

1. c
2. b
3. c
4. b

II. 14· 0,2p = 2,8p

A

- 1) $1s^2 2s^2 2p^3$
- 2) perioada a 2 a; grupa a Va A; blocul p
- 3) 3
- 4)

- 5) nemetal

B

- 1) $1s^2 2s^2 2p^6 3s^2 3p^6 4s^2$
- 2) perioada a 4 a; grupa a II-a A; blocul s
- 3) 0
- 4)

- 5) metal

III. 5· 0,4p = 2p

1. b
2. d
3. a
4. e

IV raționament corect - 1,2p, calcul matematic – 1p

$$m_{s1} = 200g$$

$$c_1 = 20\% \rightarrow m_{d1} = \frac{m_{s1} \cdot c_1}{100} = \frac{200 \cdot 20}{100} = 40g$$

$$m_{s2} = 500g$$

$$c_2 = 30\% \rightarrow m_{d2} = \frac{m_{s2} \cdot c_2}{100} = \frac{500 \cdot 20}{100} = 100g$$

$$m_{s3} = 300g$$

$$c_3 = 40\% \rightarrow m_{d3} = \frac{m_{s3} \cdot c_3}{100} = \frac{300 \cdot 40}{100} = 120g$$

$$m_{d \text{ final}} = m_{d1} + m_{d2} + m_{d3} = 40 + 100 + 120 = 260g$$

$$m_{s \text{ final}} = m_{s1} + m_{s2} + m_{s3} = 200 + 500 + 300 = 1000g$$

$$c_{\text{final}} = \frac{m_{d \text{ final}}}{m_{s \text{ final}}} \cdot 100 = \frac{260}{1000} \cdot 100 = 26\%$$
